Micromar 44 EWR(i)

Notice: New Product

Please review the following important product information updates.

We are pleased to announce that Mahr Inc. is now accepting orders for the new 44 EWR(i) inside micrometers.

The latest generation of Micromar inside micrometers offers exciting new features. The smooth ratchet stop enables extra precise measurements and the large, high contrast and lightweight display makes reading the measurement values easy. The measuring heads from Ø30mm now feature a black anodized surface and stainless steel front panels which, thanks to the hardened surface and material properties, offer improved wear and corrosion protection and are easier to clean. Another new feature is the 3-value PRESET function, which allows the user to preset dimensions and tolerances for three reference values at once.

Features:

- New ergonomic design with large LCD
- Lightweight, high contrast, and large display
- Corrosion and wear-resistant measuring heads
- Bidirectional data transfer by USB and Integrated Wireless
- Wide range of measuring sizes from 6 to 200 mm
- Clamping plate 44 EWR-gs for mounting the 44 EWR(i) on device holder
